► SKILLS

PRIMARY SKILL

- Software Developer

SECONDARY SKILL

- Manual Software QA/Testing

FUNCTIONAL SKILLS

- Test Management
- System Defect Management
- Test Case Execution and Review
- Frontend
- Backend
- Handling People
- Crimping

TECHNOLOGY BACKGROUND

- Firebase
- XAMPP
- Other Web-Based Systems (Python, Java)
- Android Studio - DART
- Creating a Lan Cable
- Setting up a DECO Mesh

TOOLS

Firestore

Claude

Xampp

Python

Java

DART

Github

Javascript

Html

CSS

Discord

C#

Android Studio

Dart

Django

Crimping

► EXPERIENCE

Internship

February 2026 – Current

Sorbetes is an apparel company that allows interns to gain hands-on experience by building real systems for actual use. I was assigned to StaycationHavenPH, an online booking platform for suites, where I assisted the development team in both system and mobile development by checking and fixing errors in my assigned tasks

Capstone Team Leader

2025 – 2026

Our team of 4 developed an Attendance Monitoring Application for the teachers of CSCQC, allowing them to time in and time out via biometrics or QR Code with two-factor authentication. I led the team, built the professors' application, set up Firebase for storage and authentication, and ensured the system was functional, responsive, and user-friendly.

President of the IT Department

2024 – 2025

I served as an officer for the BS Information Technology department, overseeing students from 1st year to 4th year throughout my junior year. This experience helped me build trust among my peers, recognize everyone's strengths and weaknesses, and develop my self-confidence.

Student Portal - CSCQC

February 2024 – March 2024

My main roles were to enroll students into the portal of CSCQC and add their class schedules using the provided system. I also managed the system, which helped me learn more about how it works. This gave me valuable ideas and insights that guided me throughout the development of my own projects.
